Problem-Solution Fit

Date	23 October 2026
Team ID	0827CY231053
Project Name	Waypoint - AI Travel Itinerary Planner
Maximum Marks	5 Marks

Problem-Solution Fit Canvas

Connect the target users, recurring planning problems and practical constraints to Waypoint's proposed solution. Customer behaviors and emotions are design hypotheses.

1. CUSTOMER SEGMENT(S) [CS] Solo travelers, couples and small groups planning short or leisure trips.	6. CUSTOMER LIMITATIONS [CL] Limited research time; budget and travel pace; dietary and mobility needs; browser access.	5. AVAILABLE SOLUTIONS [AS] Travel blogs: useful ideas but generic. Maps/reviews: detailed information but manual scheduling. Spreadsheets: flexible but time consuming.
2. PROBLEMS / PAINS [PR] Repeated destination research; scattered notes; difficult timing and preference balancing.	9. PROBLEM ROOT / CAUSE [RC] Fragmented information and no single process for building, saving and sharing a personal daily plan.	7. BEHAVIOR + INTENSITY [BE] Compare places, bookmark links and revise lists repeatedly before each trip.
3. TRIGGERS TO ACT [TR] Booked travel dates, a weekend break, a special occasion or a new destination.	10. YOUR SOLUTION [SL] Waypoint: curated templates plus AI/rule-based day plans; editable saved trips; public links and exports.	8. CHANNELS OF BEHAVIOR [CH] Online: search, videos, maps, reviews and messages. Offline: advice from friends and personal travel notes.
4. EMOTIONS BEFORE / AFTER [EM] Before: excited but overwhelmed. After reviewing a clear plan: prepared, informed and more confident.
